68

TOWNSHIP 38 NORTH, RANGE 68 EAST, MDM, NEVADA

CHAINS

GENERAL DESCRIPTION

The land resurveyed within Township 38 North, Range 68 East, ranges in elevation from about 5,000 to 7,600 ft. above sea level. The terrain varies from nearly level in the northeast portion to mountainous in the western and southern portions. The soil is gravelly, sandy, clay loam in the more level parts and rocky in the mountains. The timber consists of juniper, pinon pine, and mountain mahogany in the mountains. The vegetation is made up of Brigham tea, bitterbrush, shadscale, greasewood, rabbitbrush, cacti, sagebrush and native grass.

The township is drained for the greatest part by Loray Wash and numerous smaller washes feeding into it. The Southern Pacific Railroad, consisting of double tracks, runs the entire length of the township from section 31 to section 3. Access is provided by Nevada State Highway No. 233, paved, which runs from an ENE. direction in section 31 changing to a northeasterly direction to leave the township in section 2, and numerous trail roads.

There are some trailers located in the odd numbered sections along Nevada State Highway No. 233, a well in section 24, and in section 32, a FAA communication site with antenna and power line coming into it from the east. There are abandoned mines or prospects located in sections 33, 34, 35 and 36.
