

Survey no. 3018 A. & B.

by direct solar observation.

The distances were measured with a 500 ft. steel tape.

Note: -

The disagreements between these field notes and the location certificates of the various locations are due to errors in the latter.

Report: -

The N.E. Cor. Sec. 17, T. 23 N. R. 21 E. M. D. B. and W. is a lava rock 6x10 ins. showing 12 ins. above ground with four notches on South and East sides.

A careful search for the E. 1/4 Cor. and S. E. Cor. of said section failed to find them and I have shown intersections with section lines according to notes of subdivision survey.
