

Mount Diablo Nev,

The balance of this township is dry volcanic hills unfit for cultivation, & is mostly Mineral Land, Therefore this does survey it

General Description

With the exception of a little bottom land along Carson River, this township is unfit for cultivation. Some of the Eastern portion is dry sandy & sandy loam sage-plants. The balance is mostly dry volcanic hills, very rough & broken along the Northern boundary, & covered with sage-bushes. The rocks are a formation of porphyry & Basalt, with numerous veins of quartz, some of which are gold & silver bearing. The mining
