Land, level.

Soil, gravelly to rocky, limestone formation, 2nd rate.

Undergrowth, salt sage, shad scale.

---

GENERAL DESCRIPTION.

The land along the Nevada-California State boundary between monuments Nos. 98½ and 101 is for the most part a nearly level desert plain with the soil varying from a sandy to a gravelly and rocky soil, covered with a growth of creosote brush, salt sage, greasewood and black sagebrush.

No water is available along this part of the boundary.

The T. & T. R.R. tracks cross the boundary about midway between monuments Nos. 99 and 100.

Emil Voigt.

U.S.Cadastral Engineer.
